

21COE 物質階層融合科学セミナー

物性コロキュウム

日時： 6月26日（月）16：30 - 18：00

場所： 理学部 理学総合棟 745号室（大学院講義室Ⅰ）

講師： Helmut R. Brand (Dept. of Physics, University of Bayreuth)

題目： Phase winding in chiral liquid crystalline monolayers

要旨： We discuss our recent work on collective pattern forming effects in chiral monolayers [1], which was stimulated by experimental work of Tabe and Yokoyama [2]. We point out that the Lehmann effect, known from cholesteric crystals, provides a natural framework to understand the experimental results following up on earlier work of our group on the Lehmann effect [3,4]. We also highlight the close connection between the patterns formed in chiral monolayers and those found in smectic C films under the influence of an external force [5,6].
